Documentation

How to execute the Task

Steps:

1. Open the CMD and write the command "cd ismaile " and press Enter key.
2. Then after getting the location write the command of " npm intall " and press enter key.
3. After complete the installation write the command " npm start " and press enter key.
4. Your app will be open in browser with localhost.

Libraries :

1. **React**
2. **React-router**
3. **React-router-dom**
4. **React-redux**
5. **Redux-thunk**
6. **React-scripts**
7. **Reactstrap**

Issues during development:

I am new learner of React js so first time I have faces the some issues like libraries missing.
